## Protecting Images on the Web from right clicking

from **Raymond Kimball**  
Computer Science Department  
Montgomery College, MD

If you would like to frustrate people trying to "save as" your images to their desktop, here is a very simple method.

The basic concept is to make your image "background" and place a transparent GIF over it, so that when a viewer right clicks your image, all they get is the empty Gif.

To do this create a Table with Cells the size of image you wish to use. Create the image in a slightly smaller size than the cell and chose it as the background for the cell. In the cell place the transparent GIF. Sweet, no?
